

AprilTag tag36h11 ID 0

tag_size = OUTER EDGE OF THE BLACK SQUARE = 80.0 mm nominal (8 cells x 10.0 mm).

PRINT AT 100% / ACTUAL SIZE. Disable "fit to page".

After printing, measure the BLACK SQUARE edge (not the white margin) with a ruler/caliper.

Use that measured value (in METERS): `ros2 launch apriltag_pose apriltag_pose.launch.py tag_size:=<measured_m>`

Keep the white quiet zone clean - the detector needs it. Mount FLAT, avoid glossy paper (specular glare breaks detection).
