

Camera Calibration Checkerboard

Pattern: 9x6 INTERIOR CORNERS (10x7 squares). Nominal square = 25.0 mm.  
PRINT AT 100% / ACTUAL SIZE. Disable "fit to page" / "shrink oversized pages".  
After printing, measure across 10 squares with a ruler and divide by 10 -> real square size.  
Then: ros2 launch apriltag\_pose calibration.launch.py size:=<measured\_m> checkerboard:=9x6  
Mount FLAT on a rigid board. Any bend ruins the calibration.

10 squares = 250 mm nominal (MEASURE THIS, divide by 10)

7 squares = 175 mm nominal (MEASURE THIS, divide by 7)
